

## Why ERVA Fork?

Thicker hooks, Wider carrying surface, The hooks do not open

Completly supported hook – fork blade

Deep drewed hooks, more support to the locking hole

Original WELDOX support

ERVA fork is designed according to the turn over load, wich is much higher than theoperation load of the machine.

The fork body is manufactured of certified steel St 52-3. The blades consist of high-strength structural steel (WELDOX 700 or equalent).

## SingleArm:

ERVA SingleArm is designed according to the turn over load, wich is much higher than the operation load of the machine.

The SingleArm body is manufactured of certified steel St 52-3. The arm consists of St 52-3 steel or high-strength structural steel (WELDOX 700 or equalent).
